

ADDENDUM NO. 1

Feb 2, 2021

Humboldt Bay Harbor, Recreation and Conservation District

Notice of Request for Qualifications

Habitat Mitigation Design and Analysis

The following question was received on February 2, 2021:

I am in need of clarification about the Suction Dredging at Woodley island Marina and other Humboldt Bay Locations Section. Is it the intention of the Harbor District that an Incidental Take Permit (ITP) is acquired as part of the contract that will result from the RFQ? If not, what work will the selected contractor/team be required to fulfill related to suction dredging and acquisition of the ITP.

The Harbor District's response is as follows:

It is not anticipated that an ITP will be acquired as part of the contract. The scope of work is described in Section 8 of the Request for Qualifications. The tasks include (1) Opportunities and Constraints Analysis; (2) Habitat Mitigation Site Prioritization; (3) Conceptual Designs; and (4) Estimate Mitigation Potential. These tasks may be associated with the Harbor District's pursuit of a longfin smelt ITP for suction dredging. Specifically, the contracted work involves early stages of developing a habitat restoration program that will serve to mitigate for projects, potentially including mitigation for suction dredging impacts to longfin smelt.
